

Jacob Rosario

jacobrosario0225@gmail.com | 604-230-8765
Eligible to work in the United States as U.S. citizen

Profile

Biology graduate (BSc, University of British Columbia) transitioning into technology with a focus on AI engineering and software development. Driven by how AI systems work, I build hands-on experience designing, automating and shipping applications that solve real problems. I pair an analytical, research-oriented mindset with a builder’s drive, rapidly learning modern frameworks, AI tooling, and engineering practices to grow into software and AI engineering roles.

Technical Skills

Languages & Web: JavaScript, React, Python, Swift, SwiftUI, Three.js, HTML, CSS
Tools & AI: Claude, Prompt Engineering, Git, Github, LLMs

Technical Projects

- RepSpeed** | AirPods-based velocity tracker | Swift, SwiftUI Ongoing
- Incorporate AirPods sensor data with custom physics software to determine speed of barbell squat reps.
- Raincover** | navigation app that routes users around rain | JavaScript, React Ongoing
- Engineer a web application that leverages device GPS to route users along the least weather-exposed path to a destination
 - Design a scoring system that classifies street segments by rain exposure using satellite imagery and user feedback
 - Implement a custom pathfinding algorithm that minimizes cumulative weather exposure
- Personal Website** | interactive 3D portfolio | JavaScript, React, Three.js Jun 2026
- Built a fully responsive 3D portfolio from scratch, managing a physics engine, models, scene composition and lighting
 - Develop an engaging, theme-driven UI to showcase technical range and personality
- Spike Timer Analyzer** | computer vision timing tool | JavaScript, React Mar 2026
- Built a computer-vision tool that analyzes spike timing from video input, extracting data points (takeoff, contact, landing)
 - Delivered immediate actionable feedback to athletes through a real-time interface
- Volleyball Stat Tracker** | real-time data tracking app | React Feb 2026
- Developed a real-time tracking application to log actions and statistics during live events
 - Designed the data model and views to surface in-game insights that inform tactical decisions
 - Optimized input flows for speed and clarity, enabling reliable real-time data entry under match pressure

Certifications

- Anthropic – AI Fluency: Frameworks & Foundations**
- Studied core frameworks for working effectively with AI systems – how large language models reason, their capabilities and limitations and strategies for applying them responsibly
 - Recognized and understood the 4Ds (Delegation, Description, Discernment, Diligence)
- Anthropic – Claude 101**
- Gained foundational hands-on knowledge of Claude’s features and effective prompting techniques for building and automating workflows with AI
 - Learned best practices for giving Claude clear context and instructions to produce accurate, useful results

Education

University of British Columbia – Bachelor of Science (BSc), Biology | Vancouver, BC

Work Experience

- Barista – Unscripted Coffee** | Vancouver, BC June 2026 - Present
- Support daily operations at a newly opened cafe in a fast-paced, high-volume environment
 - Apply a systems-oriented mindset to streamline order sequencing and service workflows
- Barista – Starbucks** | Vancouver, BC & San Francisco, CA Sept 2023 - Sept 2025
- Handled 100+ transactions per shift across high-traffic locations, optimizing drink sequencing and open/close procedures with accuracy and dependability under pressure

Leadership & Analysis

- Court Coach & Analyst – Hustle Volleyball Club** | Burnaby, BC Feb 2026 - May 2026
- Assistant Coach & Technical Analyst – Vancouver College** | Vancouver, BC Sept 2025 - Dec 2025
- Head Coach – Hustle Volleyball Club** | Burnaby, BC Sept 2024 - May 2025
- Analyzed 5+ matches weekly, turning performance data into actionable adjustments while developing athletes
 - Designed and ran structured training programs, communicating data-driven insights clearly to players and staff
 - Led teams through high-pressure decisions, building collaboration, accountability, and trust across the group
